Product Description

Sno-Way UTV Spreader RVB500

See What We Can Spread

Each Sno-Way spreader offers unique, productivity-enhanced features not found on competitive products. Truck Salt Spreaders include an auger system that evenly distributes deicing material, and V-Box Spreaders feature a patented spinner design that provides superior material coverage. Snow and Ice Control products are available in a variety of formulations to meet the needs of any environment. Choose from traction aids, melting agents, and deicer products. Sno-Way's Revolutionary Spreaders are built to perform. Choose the right product for the job at hand and get the job done right. Sno-Way's V-Box Spreaders are to be used for spreading a variety of materials, including sand, salt, seed, and fertilizer. Snow and Ice Control products are designed to improve traction on slippery surfaces and prevent ice from forming.

Features:

- The Revolution V-Box family has a roto molded perimeter with ribbed hopper, mounted to an all stainless steel frame and drive support.
 - The easy on/off stainless steel and roto molded chute has a 16" four flute poly spinner to provide you long life and superior spread pattern up to 30'.
 - The 1/2 horsepower direct drive gear box and 1/3 horsepower spinner motor are fully enclosed so that water and salt does not penetrate.
 - The inside of the poly hopper walls are designed for maximum flow of the toughest materials to minimize size material bridging.
 - One harness supplies all of the power from the battery to the hopper, with a water-tight Duetsch connector and seal to connect them. The harness is plug and play for accessories. No cutting or splicing.
 - Patented, adjustable inverted vee. Adjust the inverted vee system to match the material you want to spread.
 - Optional Wetting System with Filling Station available.
 - Military Grade Primer & Powder-Coat Paint Finish
-
